It all begins with your aspiration

Where there's a will, there's a way

Our selection process is based only on talent and motivation. We don't care what degrees you may or may not have. Previous programming experience is not required. If you possess the curiosity, determination, and drive to succeed, then we want you as a Holberton School student.

Our automated admissions process removes human biases, and was created specifically to identify smart, motivated people and ignores previous education, work experience, gender, ethnicity, or age — we only ask you to have a GED or high school diploma. There's no cost to apply, so apply today!

Here's how it works:
- Fill out a short online form about yourself (about 2 minutes)
- Complete small online projects and tests that you can do at your own pace (about 2 hours)
- Complete a step-by-step challenge where you'll create your first website (about 2 weeks)
- Complete an onsite or remote interview and tech challenge

"Holberton is producing remarkable, Ivy League-caliber graduates without the costs, the time, or the prerequisites."

— Jeff Weiner, CEO at LinkedIn

Ready to define your future?

Start your journey today

Holberton

Education built for your success

Become a Full-Stack software engineer in 2 years

Learn by doing

Instead of lectures and theory, our curriculum is based entirely on practical coding projects. Our students learn through increasingly difficult programming challenges with minimal initial directions on how to solve them. As a result, our students learn to look for the theory and tools they need, how to understand them, how to apply them, and how to work as a team.

Full-stack software engineering

The first part of our on-site intensive education covers the **foundations** of software engineering, including low-level programming, DevOps, and high-level modern languages

Then, you can specialize in an emerging technology of your choice: **machine learning, AR/VR, C low-level** and **algorithms, web stack development** or you can enter our **career track**.

Through their education, students learn the soft-skills necessary to further their success after graduation. These include interview preparation, public speaking, project management, effective communication, and more.

Examples of projets:

Build a video game

Build secure infrastructres

Clone a social platform

Code your own shell

Build your own blockchain

Facial recognition engine

No upfront Tuition

Let's invest in your future

Your education at Holberton School is funded through an Income Share Agreement (ISA). Our ISAs feature no interest, term and repayment caps, and you only repay when you get a well-paying job. And with repayments that are based on a percentage of your income, ISAs tie Holberton's success to your success.

Student debt with loans in USA

40% of student loan borrowers may default on their student loans by 2023*

$1.56 trillion in student loan debt**

65% of student loan borrowers reported having less than **$1,000** in their bank account***

ISA: Investing in your future

- Only pay if your income is greater than $40,000/year
- Repayment is 17% of your income
- Repayment ends when the amount is paid in full, or after 3.5 years, whichever happens first.
- If 3.5 years pass and there is still an amount owed, the rest is forgiven
- No interest accrued
- ISA does not use credit scores
- Aligns schools and students success

Top companies hire our students

A proven path to success

Our students have landed software engineering jobs and internships across all industries and company sizes. Companies that have hired our students include:

Employment of students after Holberton (SF)

Software Engineer	70%
SRE - DevOps/SysAdmin	17%
Non-Tech	4%
Founder	3%
Security Engineer	3%
Data Engineer/ Analytics	3%
